Letter on the need to ensure the ongoing energy reviews at the European Bank for Reconstruction and Development and the European Investment Bank are aligned with the Paris Agreement goals

We are writing to you regarding the ongoing review of the energy sector strategy of the European Bank for Reconstruction and Development (EBRD).

As you may be aware, the World Bank Group demonstrated leadership in shifting away from fossil fuel finance last year in December at the One Planet Summit, committing to end its finance for upstream oil and gas-related activities after 2019.

The EBRD is a majority-European owned public finance institution, and thus we call on the EBRD to go a step beyond the World Bank in restricting oil and gas finance to demonstrate strong climate leadership.

We feel it is important for European institutions to lead the way in ending public finance for all fossil fuels, and to align their investment with the Paris Agreement on climate change. The Paris Agreement contains as one of its three key objectives “making finance flows consistent with a pathway towards low greenhouse gas emissions and climate-resilient development.”

Public finance institutions must lead the way in supporting this objective, consistent with another Paris Agreement objective of “pursuing efforts to limit warming to 1.5°C, signaling to other finance providers a rapid shift away from additional investment in long-lived fossil fuel infrastructure, which risks locking us into a carbon-intensive energy future. A growing body of evidence suggests that expanded production and use of oil and gas is incompatible with meeting globally-agreed climate goals, while existing thermal coal assets must be rapidly wound down.

In particular, we call on you to ensure that, as part of the energy sector strategy review, EBRD:

- **Ends financing for thermal coal mining and coal-fired power, and ensure financial intermediary lending does not go towards coal-based utilities or companies;**
- **Clearly and explicitly commits to a rapid and complete shift away from oil and gas, and toward zero- or low-emission development, in line with long-term deep decarbonisation strategies that are consistent with the ambition to limit warming to below 1.5°C, as enshrined in the Paris Agreement.**

By taking these important steps, EBRD can have an outsize impact on the global financial community by demonstrating the shift away from fossil fuel infrastructure. The recent heat waves that have gripped much of Europe – made far more likely as a result of climate change – are a reminder of the urgency required in addressing the climate challenge. Please act to ensure that the EBRD is not undermining efforts to support climate action by continuing to finance fossil fuels.

Sincerely,

The undersigned, representing 65 civil society organisations from 28 countries, and regional and international organisations:
